

Implementation

Exercises Computer Architecture

1 | Implementation

1.1	What is the main difference between a hard and a soft real-time system?		
	 in a hard-real-time system all deadlines must be met while in a sionally some deadlines may be missed. in a soft-real-time system all deadlines must be met while in a sionally some deadlines may be missed. 	·	
		imp/implementation-01	
1.2	What is an embedded system?		
	 Every computing system is an embedded system A computing system with a dedicated function, often with reabedded system A general purpose computer with less than 1GB of RAM is an end A system which has an ARM processor is an embedded system 	nbedded system	
		imp/implementation-02	
1.3	Faster execution time means less energy.		
	TrueFalse		
		imp/implementation-03	
1.4	Why are more and more SOC being developed insteead of CPU's?		
	 restricted availability of energy speed up often used functions both of the above
